

OPENING FRAME → START HERE

Steward creation wisely — reject apocalyptic politics that impoverish people in the name of “settled science.”

DEBATE PATH

- 1 Stewardship: Dominion + care (Gen 1:28; 2:15) — develop resources; don’t bury talents.
- ↓
- 2 Skepticism: Decades of failed catastrophes; models overpredict; natural variability matters.
- ↓
- 3 Flourishing: Abundant energy lifted billions from poverty — that is love of neighbor.
- ↓
- 4 Solutions: Dense, reliable power (nuclear + hydrocarbons) beats intermittent virtue signaling.
- ↓
- 5 Narrative check: Apocalypse, guilt, indulgences, and elite hypocrisy look like a religion.

COUNTERS

THEY SAY
“97% of scientists agree”

YOU SAY
The slogan overstates consensus on catastrophe. Debate magnitude, causes, and policies — not whether climate exists.

THEY SAY
“Extreme weather is worse”

YOU SAY
Normalized data often shows no clear upward trend in hurricanes/tornadoes/droughts. Media ≠ metrics.

THEY SAY
“Sea levels are rising dangerously”

YOU SAY
Long-term rise is slow (~mm/year). Adaptation has worked for a century; panic policies still fail the poor.

THEY SAY
“Leave fossil fuels in the ground”

YOU SAY
That consigns the developing world to poverty. No scalable replacement yet — harming the poor is not stewardship.

CLOSE → → Grant modest warming; contest catastrophe + central-planning “solutions.”
